Education

Bachelor of Technology in Computer Science

Expected 2026

Dr. Kiran & Pallavi Patel Global University

CGPA: 8.6/10

Higher Secondary (12th Grade – Science Stream)

2022

Parth Institute, Vadodara

Marks: 50%

Technical Skills

AI/ML: Python, Pandas, Scikit-learn, Keras, LLMs, Generative AI, Prompt Engineering

Development: React.js, Node.js, Express.js, .NET, MongoDB, MySQL, Microsoft SQL, REST APIs, Git

Experience

Junior AI Engineer Intern

Jan 2026 – Present

Rangsoft

Vadodara, Gujarat

- Developing a ChatGPT-like custom AI solution by fine-tuning LLMs on client-specific datasets for domain-specific Q&A
- Building full-stack AI application using React for frontend, .NET for backend services, and Microsoft SQL for database management

Software Development Engineer (SDE) Intern

Nov 2025 – Dec 2025

Bluestock Fintech

[View Certificate](#)

- Engineered an automated ML pipeline that fetches real-time financial data via APIs, performs predictive analysis to generate actionable investment insights (Pros/Cons), and stores results in MySQL for persistence
- Designed and deployed an interactive real-time dashboard to visualize key financial metrics (Balance Sheet, P&L, Cash Flow) and ML-generated insights for data-driven investment decisions

Projects

OMNIDOC AI – Multimodal Intelligence System

- Developed a multimodal AI platform capable of processing 6+ data formats — text, PDFs, Word files, images, code, and videos.
- Integrated Gemini 2.0 Pro API and Transformer-based LLM models, improving Q&A accuracy and summarization quality by 22%.
- Built custom extraction utilities for each file type with a Streamlit web interface.

OpsAssistant – AI Operations Assistant

- Built an AI-powered operations assistant to automate workflow management, task tracking, and operational insights.
- Integrated Large Language Models (LLMs) for intelligent query handling and contextual decision support.
- Designed scalable REST APIs and modular backend architecture for enterprise-level integration.
- Improved operational efficiency by reducing repetitive manual processes.

Retain-AI – Intelligent Customer Retention System

- Built AI model to predict customer churn using Scikit-learn, identifying at-risk customers with improved accuracy
- Enhanced model performance through data preprocessing, feature engineering, and exploratory analysis
- Created visual dashboards to help business teams make data-driven retention decisions
